

Standard Life Global Index Funds

We understand that investing for your life savings can be difficult. With so many funds to choose from it's hard to pick the right ones for you. Our Standard Life Global Index Funds aim to make investing easier.

You have a choice of five simple, ready-made, multi-asset portfolios. The underlying investments are managed by Vanguard, one of the worlds' largest fund managers. They are passive funds which aim to replicate or track the performance of a stock market or bond index.

The five ready-made portfolios offer different combinations of company shares and investment grade bonds (both government and corporate), allowing you to choose a fund that's appropriate to your attitude to risk.

They use simple, index tracking funds as the underlying components and provide significant levels of diversification at a low cost. The funds are continuously rebalanced so that the level of equities and bonds that you choose remain consistent, providing you with confidence and certainty into the future.

Why choose these funds?

Diversification

Each fund invests in Vanguard's index funds, giving you access to thousands of international stocks and bonds, across all major global regions and industries.

Investment mix

Each fund is managed to maintain its specific asset allocation, rebalanced to make sure they don't drift out of line from their target mix of equities and bonds. This means you can rest assured that the mix between equities and bonds will be consistent in the future.

Simple and easy to understand

Each fund only invests in a combination of equities and bonds, so no complex investment instruments to consider.

Low cost

Using Vanguard's low-cost index funds as building blocks means that the funds deliver a diversified all-in-one portfolio at a relatively low cost. Each of the five funds have an annual management charge of 0.95%.

Easy access

These funds are priced daily. If your circumstances change, it's easy to switch between the five Global Index Funds or any of Standard Life's funds that are available under your product.

Performance

Each fund consists of a number of index-tracking funds managed by Vanguard, a leader in index fund management since 1976. They have a strong reputation for generating investment returns in line with each index that they track. This provides you with the peace of mind that you'll typically receive investment returns in line with the market, gross of fees.

Warning: If you invest in these funds you may lose some or all of the money you invest

Warning: The value of these funds may be affected by changes in currency exchange rates

Warning: The value of your investment may go down as well as up

Vanguard[®]

Global Index Fund range

This range of portfolios has different levels of potential risk and return. Each fund offers a diversified blend of equities and bonds, built using Vanguard's underlying index funds. For example, The Global Index Fund 60 offers exposure to more than 60 countries, 10 equity sectors and high-quality corporate and government bonds ranging from AAA to BBB, all within more than 17,000 unique holdings across equities and fixed income. They provide professionally constructed and diversified portfolios designed to help you meet your financial goals, whatever your attitude to risk.

Standard Life Global Index Fund 20

This fund will invest approximately 20% in global equities (including emerging markets) and approximately 80% in global government and corporate bonds.

Standard Life Global Index Fund 40

This fund will invest approximately 40% in global equities (including emerging markets) and approximately 60% in global government and corporate bonds.

Standard Life Global Index Fund 60

This fund will invest approximately 60% in global equities (including emerging markets) and approximately 40% in global government and corporate bonds.

Standard Life Global Index Fund 80

This fund will invest approximately 80% in global equities (including emerging markets) and approximately 20% in global government and corporate bonds.

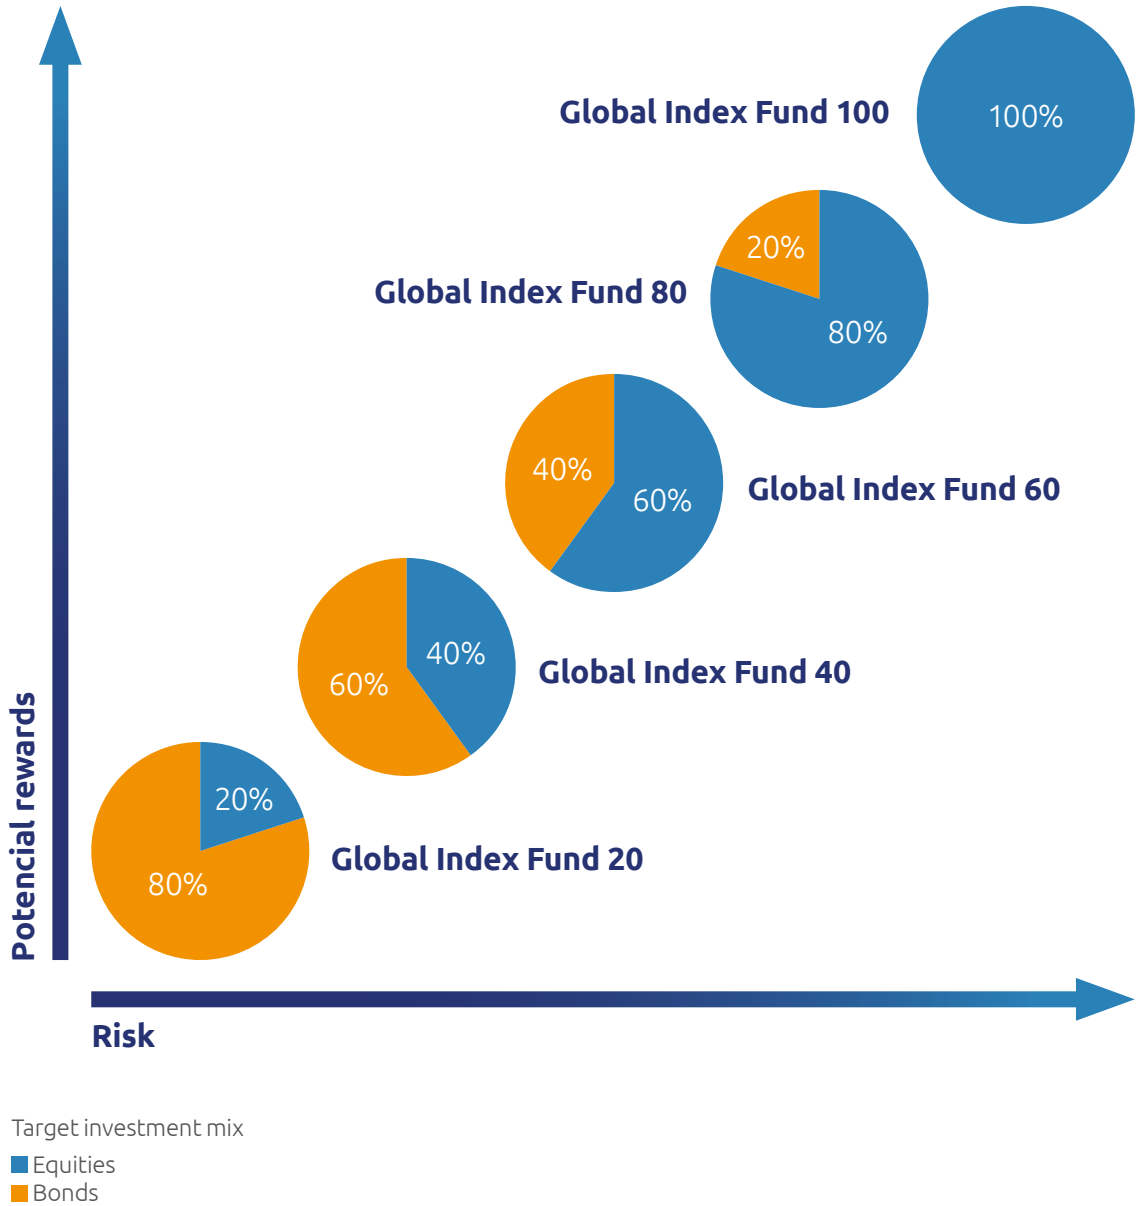

Standard Life Global Index Fund 100

This fund will invest all of the investments in a combination of global and emerging equities.

■ Equities
■ Bonds

The graph below illustrates the more risk you are willing to take, moving from Global Index Fund 20 to Global Index Fund 100, the greater the potential reward you may achieve over time. However, there is also the potential for greater losses.

World leader in passive investing

Vanguard was founded in the United States in 1975 on a simple but revolutionary idea: that an investment company should manage its funds solely in the interests of its clients. Vanguard is now the second largest fund manager in the world, helping over 50 million clients in 170 countries. They pioneered index tracking fund management in 1976 and have a strong reputation for minimising tracking errors in managing large global index funds. They manage over €7.3 trillion assets.

Vanguard's core purpose is simple—to take a stand for all investors, to treat them fairly, and to give them the best chance for investment success.

Part of Phoenix Group

There's a lot to look forward to

Standard Life is a life savings company. That means we provide pensions, retirement solutions, savings, investments and funds for each stage of your life journey. We've been working in partnership with financial advisers helping people plan and enjoy their futures for more than 180 years in Ireland. Operating internationally, our team of 400 people in Ireland delivers products and services to support customers and advisers.

Investment choice

As well as the range of Global Index Funds, there is a comprehensive range of other funds to choose from. Please speak to your financial adviser for more details.

Staying up to date

For the latest information on our Global Index Funds, visit our Fund Centre on www.standardlife.ie/funds. This keeps you in the loop on what you need to know, from the latest asset allocation to the most up to date fund price and performance.

Financial strength

Financial strength is arguably one of the most important considerations when choosing a financial provider. Standard Life International dac is a subsidiary of Phoenix Group Holdings plc. Phoenix is listed on the London Stock Exchange, a constituent of the FTSE 100 Index. Independent credit rating agency Fitch recognised its strong financial position with an A+ credit rating.

*At June 2023

Are these funds right for me?

We want to make sure that you only invest in funds that are right for you. So how will you know if the Standard Life Global Index Fund is the right choice for your life savings? Take a look at the statements below. If they relate to you then this could be the right fund for you. Your financial adviser should help you make this decision.

These funds may be suitable if you:

- are seeking a fund solution that is tailored to closely match your attitude to risk
- have an investment horizon of at least five years
- can take risk with your capital

These funds may not be suitable if you:

- do not want to take risk with your capital
- are investing for less than five years
- are not prepared to accept periods of losses due to the volatile nature of equity and bond markets

Is Environmental, Social or Governance (ESG) integrated into the investment process?

These are passively managed funds and aim to track the performance of a number of specified indexes, by holding a portfolio of all or similar securities held in the indexes themselves. The underlying indexes that these funds track are not ESG aligned indexes and do not incorporate ESG criteria when considering companies/securities for inclusion in the indexes themselves.

As such these funds do not incorporate ESG considerations into the investment strategy, nor are there any specific ESG screens applied for investments to be eligible for inclusion in the funds.

Furthermore, investments within these funds do not take into account the EU Taxonomy criteria for environmentally sustainable economic activities.

How do I know my attitude to risk?

To know what the right investment choice is for you, you need to consider your personal circumstances and know what level of risk you're comfortable with. Our website offers a Risk Profiler to help you understand what your attitude to risk is.

Your financial adviser can take you through this Risk Profiler, or go to **standardlife.ie** and complete it online.

Important things to consider

All investment involves risk. These funds offer no guarantee against loss or that the Fund's objective will be attained. This is not a guaranteed or capital protected product. There are risks to your capital should you choose to invest in these funds.

Investment risk is concentrated in specific sectors, countries, currencies, or companies. This means the funds are more sensitive to any localised economic, market, political, or regulatory events.

Investors in these funds may buy and sell units on any normal business day.

The value of bonds and fixed income related securities is affected by influential factors such as interest rates, inflation, credit spreads and volatility which, in turn, are driven by other factors including political, economic news, company earnings and significant corporate events. Movements in currency exchange rates can adversely affect the return of your investment.

While the bond allocation in these funds invest predominantly in investment grade bonds there is always a risk that the bond issuers may not be able to pay the income as promised or could fail to repay the capital amount used to purchase the bond. Where a bond market has a low number of buyers and/or sellers, it can be hard to sell particular bonds at an anticipated price and/or in a timely manner.

The value of investments within the funds can fall as well as rise and is not guaranteed – an investor may get back less than they paid in.

The euro value of overseas assets held in the funds may rise and fall as a result of exchange rate fluctuations.

In extreme market conditions, some securities may become hard to value or sell at a desired price. This could affect these Fund's ability to meet redemptions in a timely manner.

The funds could lose money as a result of the failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

The funds may invest in China A shares (companies listed on Shanghai Stock Exchange (SSE) and the

Shenzhen Stock Exchange (SZSE)) and in other emerging market equities and bonds. Investing in emerging markets involve a greater risk of loss than investing in more developed markets due to, among other factors, greater political, tax, economic, foreign exchange, liquidity, and regulatory risks. The funds may also invest in Frontier Markets which involve similar risks, but to a greater extent since they tend to be smaller, less developed, and less accessible than other Emerging Markets.

Investing in China A shares involves special considerations and risks, including greater price volatility, a less developed regulatory and legal framework, exchange rate risks/controls, settlement, tax, quota, liquidity, and regulatory risks.

The funds may invest in companies with Variable Interest Entity (VIE) structures in order to gain exposure to industries with foreign ownership restrictions. There is a risk that investments in these structures may be adversely affected by changes in the legal and regulatory framework.

At certain times and when you cash in your policy, there is likely to be tax payable. This will depend on the policy type you're invested in and your personal circumstances.

Risk Factors

Equity Risk

The funds invest in equities and equity related securities. These are sensitive to variations in the stock market which can be volatile and change substantially in short periods of time.

Bond Risk

These funds can invest in bonds, the value of a bond may fall if, for example, the company or government issuing the bond is unable to pay the loan amount or interest when they are supposed to. The value may also be affected by movements in inflation and interest rates which may result in the value of the bond rising or falling. This may (or will) result in the value of the funds falling.

Interest Rate Risk

When interest rates rise, bond and loan values generally fall. This risk is generally greater the longer the duration of a bond investment is.

Currency risk

Movements in currency exchange rates can adversely impact the return of your investment. Currency hedging may be used but is not guaranteed to completely eliminate currency risk.

Counterparty risk

The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments may expose the fund to financial loss.

Inflation Risk

The value of your investments may not be worth as much in the future due to changes in purchasing power resulting from inflation.

Credit risk

The issuer of a financial asset held within the funds may not pay income or repay capital to the funds when due.

Liquidity Risk

Liquidity risk occurs when the relevant market is inefficient, and it may not be possible to initiate a transaction or liquidate a position at an advantageous time or price.

Index Tracking risk

The funds are not expected to track the performance of the underlying indices at all times with perfect accuracy. The funds are, however, expected to provide investment results that, before expenses, generally correspond to the price and yield performance of the indices.

Index Sampling Risk

As these funds use an index sampling technique whereby a representative sample of securities are selected to represent an index, there is the risk that the securities selected for the funds may not, in the aggregate, approximate the full index.

Use of derivatives

These funds may use investment techniques (including Derivatives) to seek to protect and enhance the value of the funds and to manage the funds risks. Derivatives, such as futures, options and swaps, are linked to the rise and fall of other assets. In other words, they “derive” their price from another asset.

They can generate returns when share prices and/or indices fall.

Investing in derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the funds being leveraged (where economic exposure and thus the potential for loss by the funds exceed the amount they have invested) and in these market conditions the effect of leverage will be to magnify losses.

These funds do not make extensive use of derivatives.

Securities Lending

The assets in these funds may be used for the purpose of security lending in order to earn an additional level of return and offset the cost of the funds. While securities lending increases the level of risk in the funds it may provide an opportunity to increase the investment return.

Switching your funds, transferring or cashing in

You may be one of many investors in a fund. Sometimes in exceptional circumstances:

- We may also change the pricing basis of a fund to reflect cash flows in and out. If it's a property based fund, due to the high transaction charges associated with the assets, this can result in a significant movement of the fund price
- We may also wait before we carry out your request to switch your funds, transfer or cash in your policy. This delay could be up to a month. But for some funds, the delay could be longer, for example, if it's a property based fund, it may be up to 12 months because property and land can take longer to sell

If we have to delay switching, transferring or cashing in, we'll use the fund prices on the day the transaction takes place – these prices could be very different from the prices on the day you made the request.

These are processes which aim to maintain fairness between those remaining invested and those leaving a fund.
